> Collaborates on the development of AI agents for a leading client, including: based on available contexts and knowledgebase using RAG.

- Enhanced the performance of an AI task management agent that processes customer support communications from Gmail, Slack, and Fireflies, utilizing Python, OpenAl, LangChain, LangGraph,

Optimized an AI email responder agent for Gmail, improving response accuracy and efficiency using Python,

Developed a customer onboarding workflow to track activity and proactively contact customers about their

Developed and deployed AI agents using Serverless architecture on AWS, integrating scalable backend

Built and optimized AI workflows using Python, Node.js, and TypeScript, integrating RESTful APIs for

Enhanced AI agent performance through continuous monitoring, testing, and code reviews to ensure

Designed and implemented ETL workflows and data pipelines using AWS services to improve performance

Redesigned Lyons Global™'s Learning Management System (LMS) using WordPress, integrating interactive modules, document-based resources, video learning, and a user registration with course access approval

Developed the Lyons Global™ official website using WordPress, implementing a custom theme, post types, and fields to create a modern, user-friendly interface that highlights the company's expertise in digital health

Developed Bilis Delivery using Laravel and Flutter, a cross-platform food delivery app with real-time tracking,

Developed an all-in-one platform for faculty, students, and guests using CodeIgniter 4 with balance tracking,

Developed a queuing management system using Laravel and Vue.js for cashier, registrar, and other offices

Built an Al Agent for a ChatSDK that can determine the intent, sentiment, is able to respond to queries, and assess the relevancy of the answers with a QA, with Python, OpenAI, and RAG using a

Configured a PowerEdge R440 server to host an internal Laravel-based document records management

Refactored a Blogger website theme implementing a client-side JavaScript function to prevent bypass of links

order management, and delivery status updates for delivery riders, restaurants, and customers.
